

# Nearshore Surface Oil Forecast Deepwater Horizon MC252

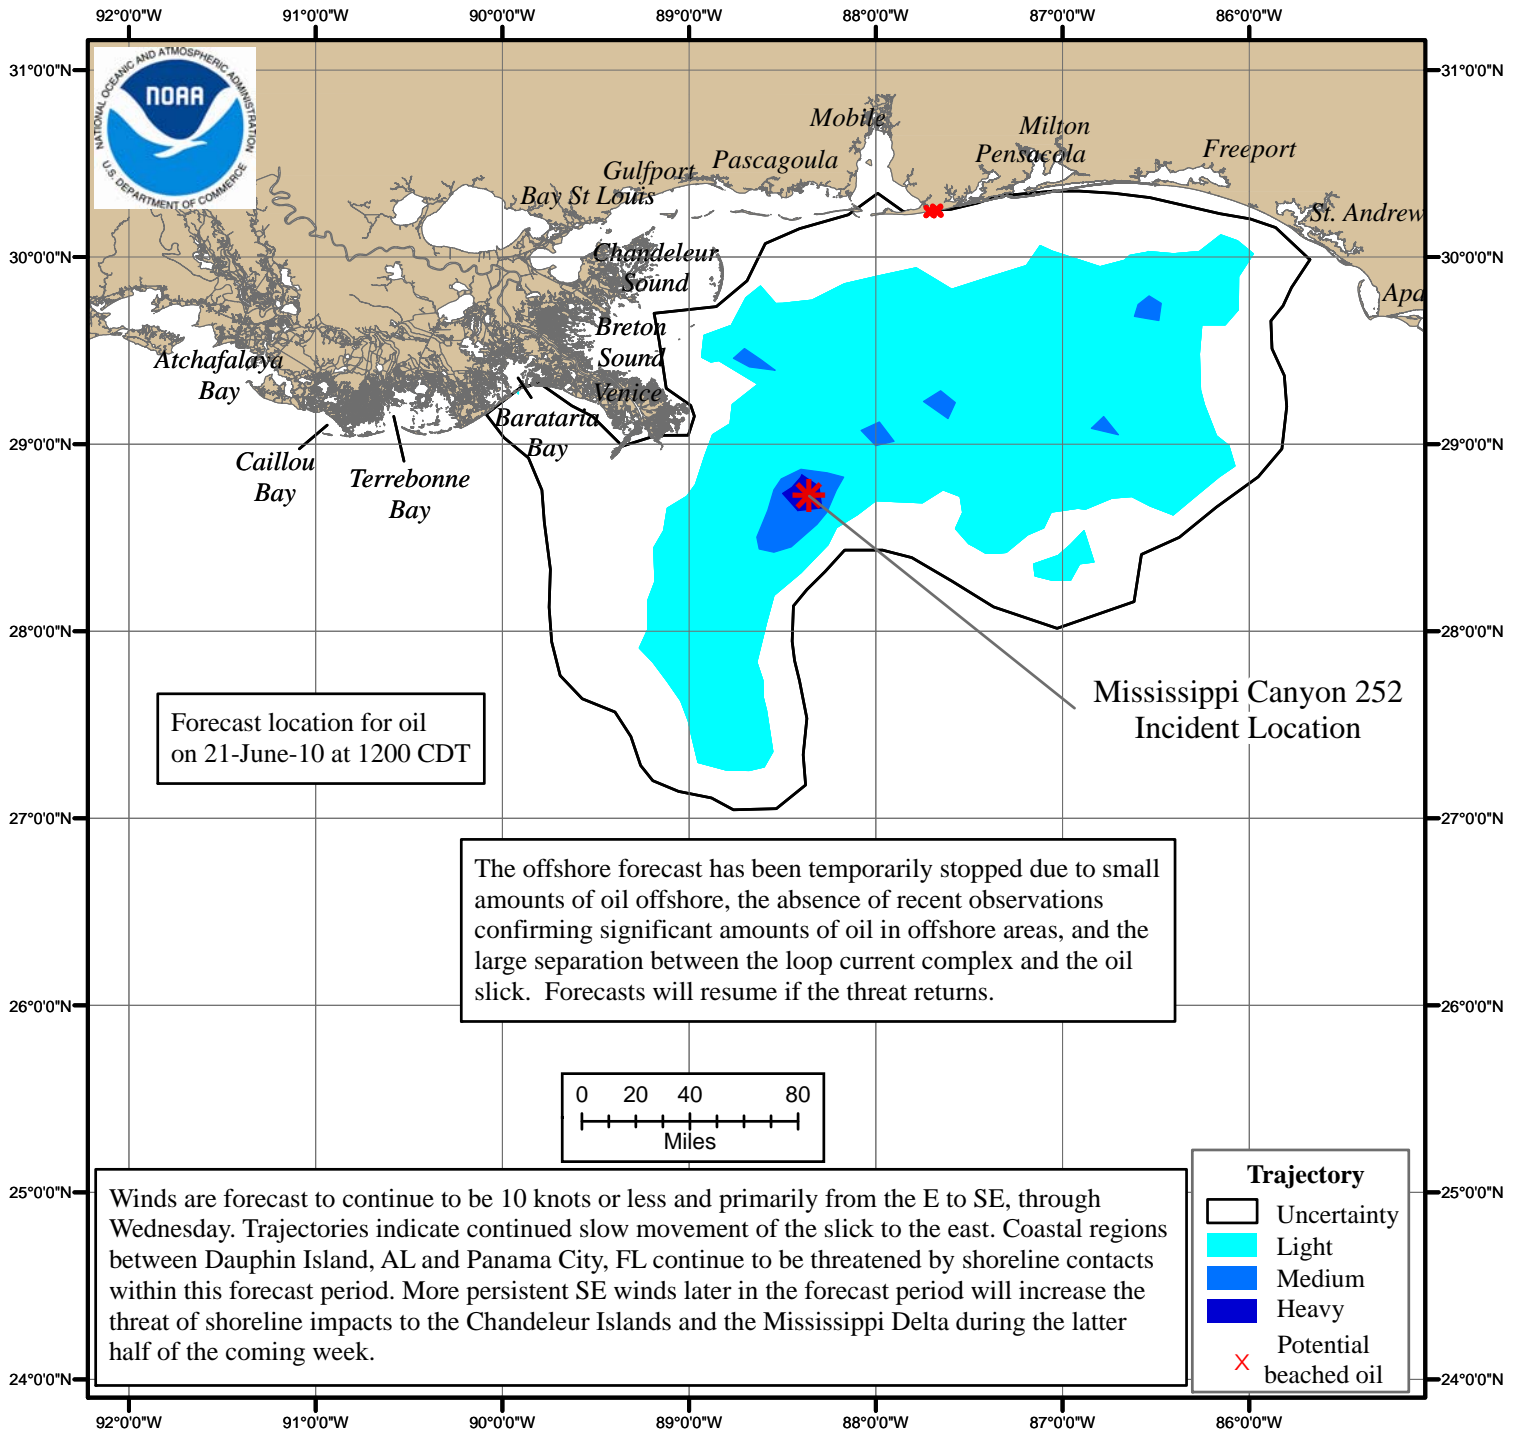

NOAA/NOS/OR&R

Nearshore

Estimate for: 1200 CDT, Monday, 6/21/10

Date Prepared: 2100 CDT, Sunday, 6/20/10

This forecast is based on the NWS spot forecast from Sunday, June 20 PM. Currents were obtained from several models (West Florida Shelf/USF, TGLO/TAMU, NAVO/NRL) and HFR measurements. The model was initialized from Sunday satellite imagery analysis (NOAA/NESDIS) and overflight observations. The leading edge may contain tarballs that are not readily observable from the imagery (hence not included in the model initialization). Oil near bay inlets could be brought into that bay by local tidal currents.

Next Forecast:  
June 21st PM
