

Updated Geodatabase for
Atlas Name: **Guatemala**
Date of Atlas: **2001**
Atlas Number: **none used**
Date of update: **6/20/2011**
Processed using ArcMap 10.0

Changes made:

- Modified datum from NAD 27 to NAD 83. (GCS_North_American_1983, transformation NAD_1927_To_NAD_1983_NADCON)
- Changed hydro layer symbolization
- Created guatemala_carto layer (this allows for symbolization of multiple ESI type lines. It should be used with the ESI lines layer particularly when creating maps. The reference scale should be set to 1:24K)
- Generated atlas specific symbol style (GuatemalaESI.style)
- Set reference scale to "none"
- Deleted extraneous fields from each attribute table (remnants of the arc/info coverage)
- ***There is no breed_dt file for this atlas***
- ***At this time, the Guatemala GDB will NOT work with the ESI tools due to a somewhat different database set up.***
