

ArcView Project Notes

To utilize the ArcView project on this CD, you must first convert the project file to indicate the path to the shape file directory. If you are running in a Windows environment, first move the VI.APR file to your hard drive. Make sure the project file is unlocked, then run SETPATH.EXE. You will be prompted to select the project's .apr (in this case VI.APR) file and then any file in the Shape file directory. You only need to do this once, unless you move the Shape directory to another location. In that case download the VI.APR from the CD and rerun the above programs. You may keep the shape files on the CD or you may move them onto your hard drive.

If you are running on a UNIX platform, you will need to set a global variable, AVVI to the path where the Shape file directory resides. For example, from the C shell you would enter:

```
setenv AVVI /cdrom/avproj/shape
```

if you wanted to run from the CD and your CD was mounted at the directory /cdrom. You may also move the shape file directory onto your hard drive.
